Aim: Initiate the semester-long StudentHub portal by identifying the problem scope, user roles, key modules, navigation flow, and minimum 10 pages. Create a sitemap, low-fidelity wireframe, project folder structure, README file, and GitHub repository.

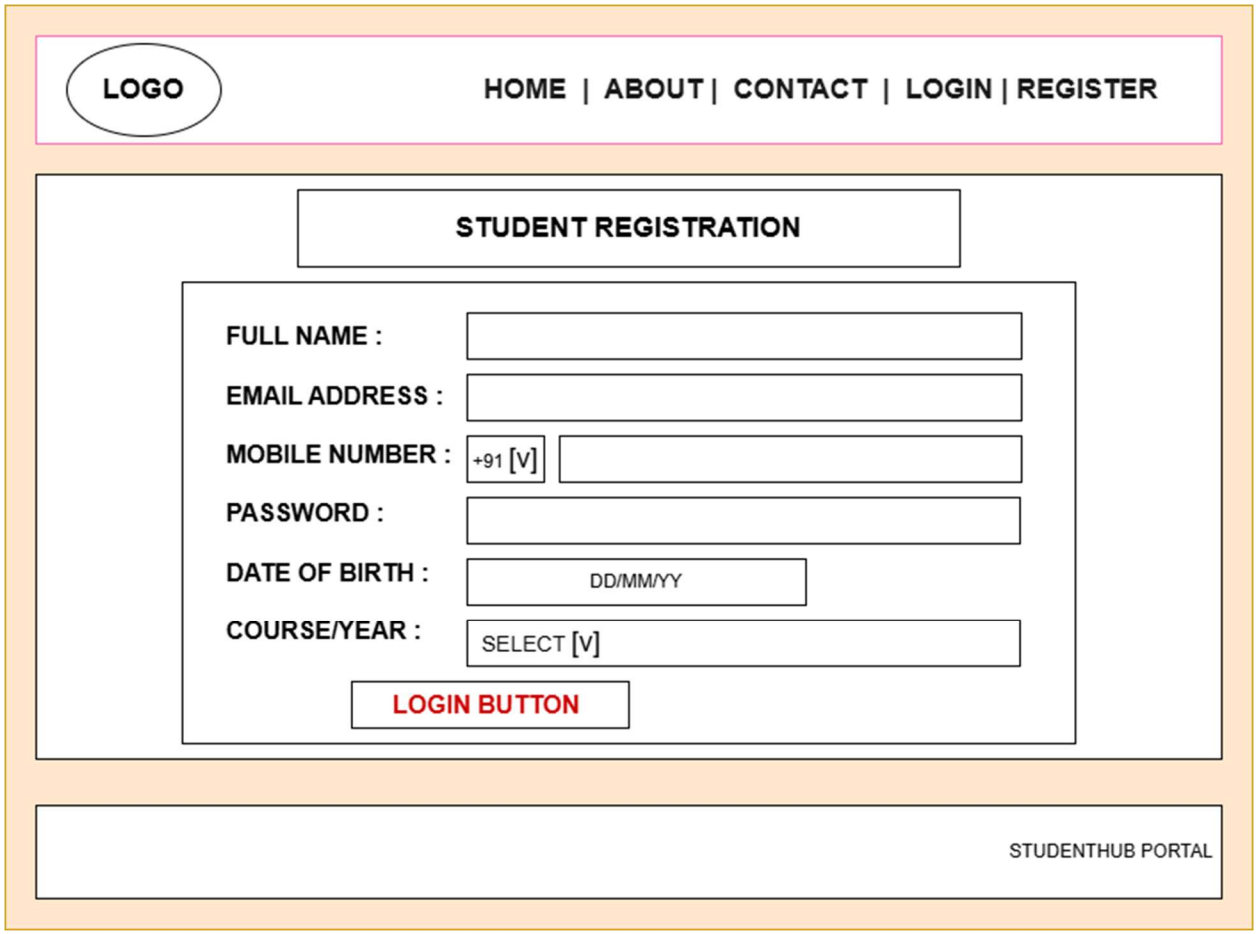

Tools/Technology to be Used: Draw.io App

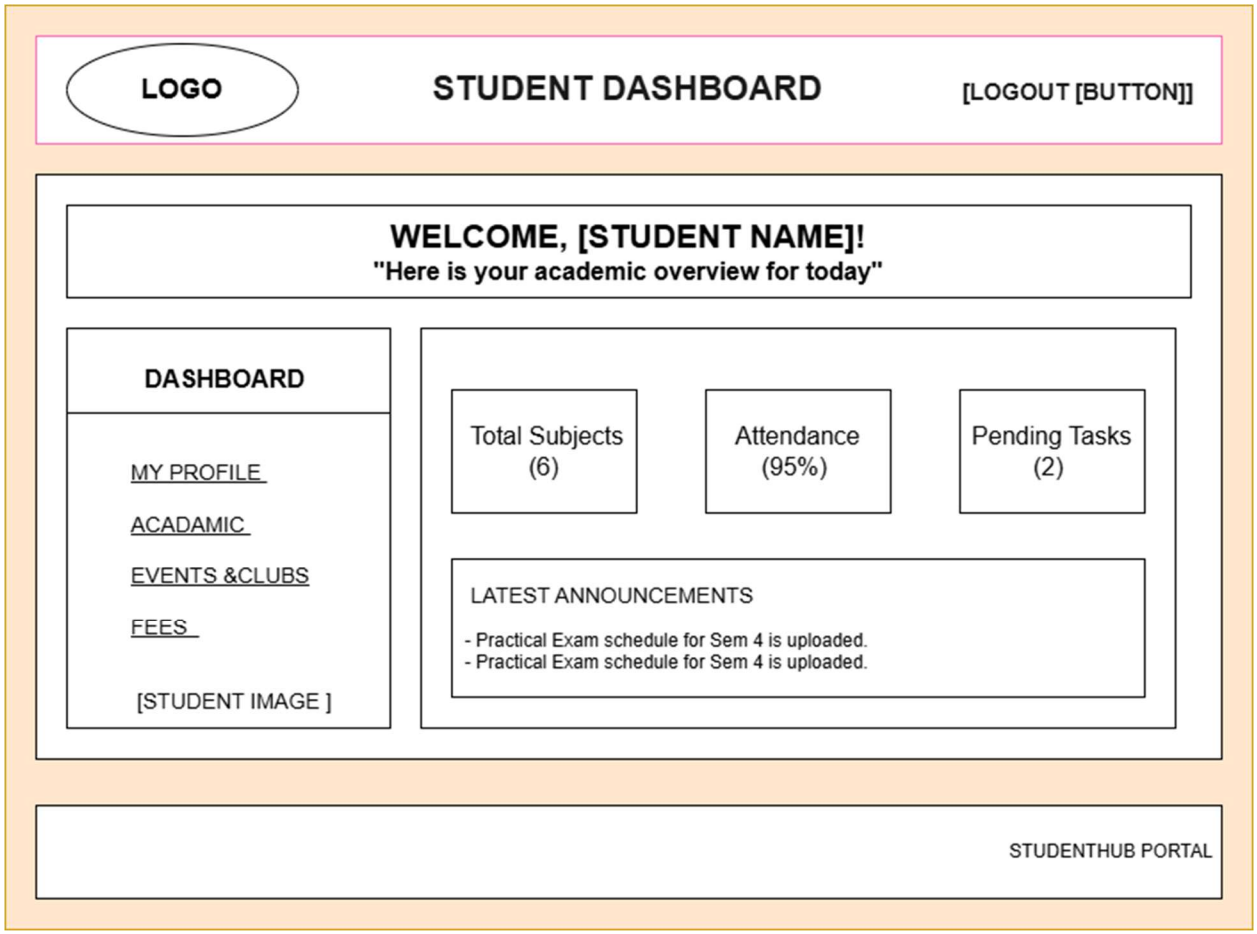

Theory Logic: The core concept is to analyze StudentHub requirements and design its basic project structure using sitemap, wireframe, user roles, navigation flow, folder structure, README, and GitHub before actual implementation.

Question-Answer:

1. What is URL and parts of URL?

Ans : URL stands for Uniform Resource Locator. It is the address used to locate a resource on the Internet or on a web server.

Example:

https://www.example.com/student/profile.html

Parts of URL:

- Protocol
- Domain
- Path
- File

2. How does HTML file processed in web browser?

Ans : The browser reads and parses the HTML file, creates the DOM, applies CSS, executes JavaScript, and renders the webpage.

3. How will page navigation flow be managed among all HTML pages?
Ans: Page navigation will be managed using HTML hyperlinks (<a> tag) that connect different HTML pages.

4. How will GitHub commits be maintained after each practical?
Ans: After each practical, changes will be added, committed with a meaningful message, and pushed to the GitHub repository.

Conclusion: The StudentHub project foundation was successfully prepared by analyzing requirements, defining user roles and modules, creating the sitemap and wireframe, organizing the project structure, and setting up GitHub for version control.
